Professional Summary

Computer Science master's graduate with eight years of engineering and construction project management experience. Builds practical Python and SQL applications, including a deployed workout-history demo and a personal recovery journal. Seeking software engineering, data analytics, or business intelligence opportunities; relocating to New York City or Boston in January 2027.

Technical Skills

Development: Python, SQL, Java; Streamlit, SQLite, HTML/CSS, Git, GitHub, GitHub Pages, VS Code

Data: pandas, NumPy, Matplotlib, Jupyter, CSV processing, relational databases, data cleaning, Excel (advanced)

Practices: Parameterized SQL, input validation, database constraints, virtual environments, dependency pinning, application deployment, documentation

Selected Software Projects

Weightlifting Training Log | Python, SQL, SQLite, Streamlit | 2026

- Built a training log with related exercise and workout-set tables, foreign keys, input constraints, and parameterized queries to record dated sets, weights, and repetitions.
- Added exercise and date filters, latest-workout lookup, per-exercise summaries, CSV export, and a separate database backup utility.
- Deployed a read-only fictional-data demo on Streamlit Community Cloud; verified desktop and iPhone access and resolved table-rendering issues using static tables and a pinned Streamlit version.

Recovery Journal | Python, Streamlit, SQLite, pandas | 2026

- Created a browser app to record activity, observations, and optional weight and circumference measurements, with saved history and measurement charts.
- Verified persistence across app restarts and excluded personal records from source control.

Portfolio and Practical Data Tools | HTML/CSS, Python, SQL, GitHub Pages | 2026

- Published a portfolio with résumé access, project links, and QR sharing; programmed and tested an NFC tag linking to the portfolio.
- Built tools for CSV job-application summaries, rowing splits, running pace, savings goals, and conference company shortlisting with separate private reference data and fictional samples.

Professional Experience

Construction Project Manager | Jacobs Engineering, Stanford University (SLAC National Accelerator Laboratory), Related California

2018–Present | Engineering and construction project management roles

- Served as an owner's representative, coordinating engineers, contractors, and clients across approximately 10 concurrent projects within a roughly $150M project portfolio.
- Tracked project costs, labor, schedules, and forecasts; reviewed variances and prepared reports to support project decisions.
- Managed RFIs, drawing clarifications, site documentation, meeting minutes, and checklists using Excel, Procore, and Bluebeam.
- Communicated project status and technical issues to clients and cross-functional teams and coordinated follow-up actions.

Education

Case Western Reserve University | MS in Computer Science | May 2026

Coursework: Database Systems, Analysis of Algorithms, High Performance Data Computing, Applied Statistics, Data Privacy, Programming Language Concepts

Purdue University | BS in Civil Engineering | May 2018
