Samantha Devetski

samantha.devetski@icloud.com | LinkedIn

Professional Summary

Data-driven professional with eight years of experience leading large-scale engineering projects. MS in Computer Science with focus on computational perception, high-performance data computing and applied statistics. Experience with Python, SQL, pandas, NumPy, MATLAB and statistical modeling. Experienced in planning/scheduling and cost forecasting models and transforming raw data into implementable solutions. Strong communicator regarding complex analyses to stakeholders and optimizing workflows under tight deadlines. Seeking a Data Analytics or Software Engineering role to apply analytical, business and technical expertise.

Technical Skills

- **Programming:** Python, SQL, Java, Kotlin, C (basic), MATLAB, R
- **Data & ML:** Pandas, NumPy, Matplotlib, Scikit-learn (in progress), Jupyter
- **Statistics:** Hypothesis testing, regression, probability distributions, statistical modeling
- **Data Systems:** Relational databases, SQL querying, data cleaning, ETL fundamentals, Data Processing, Power BI
- **Tools:** Git, Anaconda, VS Code, Excel (advanced), MS Project
- **Concepts:** Data analysis, OOP, Agile/Scrum, REST APIs, Algorithms, High Performance Computing, Data Science
- **Learning:** Applied statistical modeling, machine learning pipelines, AWS basics

Education

Case Western Reserve University **May 2026**
Master of Science, Computer Science *Cleveland, OH*

- **Coursework:** Computational Perception, High Performance Data Computing, Database Systems, Analysis of Algorithms, Programming Language Concepts, Smartphone Security, Data Privacy, Applied Statistics, Technology Marketing Strategy

Purdue University **May 2018**
Bachelor of Science, Civil Engineering *West Lafayette, IN*

- **Applicable Coursework:** Computer Programming in C, Python for Physics, Excel for Large Data, Matlab for programming and data analysis, R for Statistics, Business & Project Management

Academic Projects

Predictive Analytics & Statistical Analysis

- Applied statistical modeling techniques to analyze structured datasets and identify key trends
- Performed exploratory data analysis & hypothesis testing
- Built regression and classification models using Python
- Created visualizations to communicate analytical insights and make data-driven decisions

SQL Database & High-Performance Data Processing

- Designed relational database schema and wrote SQL queries for analytical reporting
- Generated summary metrics to support business and operational insights
- Explored parallel data processing approaches for large datasets

Data Mining

- Cleaned and transformed raw data to prepare datasets for analysis
- Applied clustering and classification techniques to explore relationships within data
- Conducted feature selection and model comparison
- Interpreted analytical results and translated resuts into practical solutions

Algorithm-Based Data Solutions

- Implemented algorithms for data processing and optimization problems
- Analyzed computational efficiency and improved solution performance
- Developed modular and readable code for reusable data workflows

Data Privacy & Security

- Applied data anonymization concepts to protect sensitive information
- Evaluated privacy considerations in data analytics workflows
- Designed secure data handling approaches for analytical environments

Professional Experience

Jacobs Engineering, SLAC National Laboratory, Related California **2018 – Present**

Construction Project Manager

- Managed multimillion-dollar projects using quantitative analysis for schedule forecasting, cost tracking, and risk assessment
- Developed schedule and cost forecasting models using Excel-based quantitative methods
- Analyzed project variance data to identify budget deviations and support resource allocation decisions
- Built reporting workflows to communicate key project performance metrics
- Translated technical project data into actionable insights for executives, clients, and cross-functional stakeholders
- Conducted root-cause analysis using statistical reasoning and structured data evaluation
- Applied probability distributions and quantitative methods to assess project risks and uncertainty
- Performed statistical analysis to support risk mitigation and schedule optimization strategies
- Communicated analytical findings to non-technical stakeholders to support data-driven decision-making
- Coordinated cross-functional teams of engineers, contractors, and clients while managing data-informed project priorities
- Managed multiple concurrent analytical workflows and maintained version-controlled documentation
